

API Setlr.com V1

Base url : <https://api.setlr.com>

Formatting: JSON

Encoding: UTF-8

Endpoints	Types	Returns	Comments
/rate	GET	JSON array of rates	'all' => float 0.04
/rate/ langpair	GET	JSON array of rates	Langpair if exists => float or all => float
/job	POST	JSON array of langpair => int id	POST body must contain JSON encode : Object \$post Array \$langpairs Ex : \$langpairs = array('fr-en', 'fr-de'); Returns array('fr-en' => 1001, 'fr-de' => 1002)
/job/ id	GET	JSON object post	

3 main functionalities of API

- 1 get current rate for a translation job (GET /rate or GET /rate/:langpair)
- 2 send a job to the API (POST /job) and receive the job id in return
- 3 retrieve translated job (GET /job/:id) and receive the translation in the same format as what as been sent

Note :

Current « security » is based on request origin and API token.

Future release :

OAuth2 authorization scheme

New endpoints to retrieve billing history in WP Dashboard
